SUMMARY

Analyst-turned-product-thinker who didn't wait for the PM title to start doing PM work. I stopped just reporting what was wrong and started figuring out what to build to fix it. Spotted operational gaps, shipped AI-powered internal tools from 0→1, and drove process changes that saved ~6 hrs/month all while shadowing PMs on roadmap planning, sprint rituals, and backlog prioritization. Now ready to own the product lifecycle end-to-end.

SKILLS

Product: PRDs & User Stories, Roadmapping & Prioritization, KPI Definition, User Research, A/B Testing, Stakeholder Mgmt,

Analytics: SQL, Data Analysis & EDA, Power BI, KPI Dashboarding, Funnel & Cohort Analysis

Tools: Figma, Jira / Linear, Confluence / Notion, Miro

EXPERIENCE

Product Support Analyst — Wipro Limited

Jun 2025 – Present

- Noticed that engineers had no clear view of their own performance defined 4 tracking KPIs, surfaced a 28% bottleneck in support operations, and authored the change request that cut manual effort by ~6 hrs/month.
- Automated the most common ad-hoc data requests into self-serve reports, volume dropped 14% and the team could actually focus on higher-priority work.
- Embedded with PMs during sprint planning, roadmap reviews, and stakeholder syncs contributing to PRD drafts, writing user stories, and evaluating release trade-offs.

Associate Support Analyst — DXC Technology

Sep 2024 – Jun 2025

- Mapped out a support workflow end to end, found where cases were stalling, identifying user friction points and proposing solutions that reduced processing time by 24%.
- Built validation logic across datasets that caught 3 classes of errors pre-production, reducing downstream incidents by ~22% and improving release confidence.
- Collaborated with PMs to translate operational findings into user stories and requirement docs, contributing directly to the next-quarter product backlog.

Product & Engineering Intern — Varcons Technologies

Jan 2023 – Mar 2023

- Owned end-to-end delivery of a consumer social app from feature scoping and UX flows to shipping production code in React JS, TypeScript, and Appwrite driving an 18% engagement uplift.
- Made product prioritization calls (infinite scroll vs. performance optimization) by evaluating user behavior patterns and balancing technical constraints with business goals.

PRODUCT PROJECTS

RCA AI Support Agent Tool

- Identified recurring first-contact resolution failures, defined the product vision for an AI-powered RCA assistant with guided troubleshooting and video-based resolution.
- Designed smart escalation workflows and automatic ticket documentation logic, reducing duplicate effort and cutting average engineer handling time.
- Understood the end-to-end product spec user journey mapping, edge-case definition, and acceptance criteria collaborating with engineering through launch.

AI Workload Balancer & Capacity Planner

- Identified uneven ticket distribution causing engineer burnout and SLA breaches, designed an AI-powered workload balancer using real-time capacity tracking and predictive load forecasting to auto-recommend optimal assignments.
- Built an ML-based complexity scoring engine that predicts handling time per ticket using issue type, historical patterns, and sentiment analysis replacing gut-feel assignments with data-driven routing.
- Defined the "balance ratio" metric, designed the manager-facing capacity view, and rolled out across 3 teams reducing SLA breaches and surfacing burnout risk through AI-generated early warning alerts.

CERTIFICATION & EDUCATION

Microsoft Certified: Azure Fundamentals (AZ-900)

B.E, Computer Science Engineering, Jyothy Institute of Technology, Bangalore | GPA: 8.22/10

Microsoft

2020 – 2024
